

Status

- Very good progress on
 - SW, thanks to developers and beta testers
 - deep analysis of results thanks UCSB, Karlsruhe
- **New SW Releases:** ARC 6.0 and LT 1.0, both DB compliant
- Limit on max bias current @ 500 V is 12 μA for 1 sensor, 24 μA for 2 sensors modules: please confirm
- **But we still have so much to do ! We have to react faster and with more thrust than ever !**
 - **Install and test new SW as soon as released: who did it ?**
 - Optimize your setup, grounding, CMN, shielding, cabling.....
 - The interpretation of data from xcalib (or other module tested) is still missing: root files or plots are NOT enough
- **I had NO feedback on module test DB. Is there anyone working on this VERY important issue?
WE ABSOLUTELY NEED MANPOWER!**
